

Leah English

leaheenglish10@gmail.com | Chicago, IL | 630.405.9102 | leaheenglish10.github.io

Skills

- Python - Numpy, Matplotlib, Scipy, Pandas
- C++
- Data Analysis
- Fortran
- Data Visualization
- Exemplary Problem Solving Skills
- GitHub
- Attention to Detail
- Experienced Presentation and Communication Skills

Experience

SpiderRock, Chicago IL — Market Data Entitlement Administrator August 2025 - Present

- Constantly review and improve operational tasks through automation to increase efficiency and reduce manual errors
- Liaison between various internal departments and external data vendors to resolve issues and support business needs
- Ensure the firm complies with all data licensing rules and regulations set by exchanges and vendors
- Manage and control which users can access specific market data, ensuring compliance with vendor licensing agreements
- Maintain an accurate inventory of all contracts, services, and users to report to vendors

Just Roots, Chicago IL — Growing Young Leader Internship June 2025 - August 2025

- Support farm operations and practice regenerative growing, providing food to the community
- Engage in a variety of workshops that address health and wellness, good money management, and other holistic life skills.

CIERA - Northwestern University, Evanston, IL — Research Assistant September 2024 - Present

- Numerically simulate stars in a small galaxy merging with a larger galaxy using a C++ based cosmological code, GADGET-4, and Northwestern's Quest High-Performance Computing Cluster supercomputer. Explore effects of mass, orbit, and number of stars as they merge. Visualization and analysis using Pandas and Numpy in Python
- Compare particle spray methods modelling streams of stars using Python's Gala package to a new code currently being developed at UNC-Chapel Hill. Determine the most efficient and effective way to compare the data differences using statistical methods such as 2D histograms and density mapping
- Present at AAS 245 poster session and writing results in an academic journal using LaTeX

Illinois Institute of Technology, Chicago IL — Student Research Assistant June 2023 - Present

- Model the evolution of a binary star system using a Fortran-based stellar evolutionary code, exploring the effects of different mass transfer types. Use Python to analyze the data and visualize the evolution of the binary as mass is transferred
- Present at AAS 243 poster session and published in a research note

CIERA REU - Northwestern University, Evanston, IL — Internship June 2024 - August 2024

- Analyze large sets of data from numerical simulations of stars in a smaller galaxy that is colliding with a larger galaxy using Python. Visualize the stars in the galaxy by making movies of their positions over time, and also calculate the stars' energies, angular momentum, and orbital coordinates using Python
- Took Python workshops, presentation workshops, and GitHub workshops that strengthened my transferable skills

Illinois Tech Admissions, Chicago, IL

Hawk Ambassador

August 2022 - May 2025

- Give tours, answer phone calls and emails, help families at events for prospective students. Create a friendly environment to encourage visitors to come back.

Senior Lead Hawk Ambassador

January 2024 - October 2024

- Recruit and interview Hawk Ambassadors, create schedules, train, and manage progress in the office. Run monthly meetings.

Illinois Tech Physics Department, Chicago, IL — Physics Outreach Ambassador January 2024 - May 2024

- Advise accepted physics and astrophysics students to help them have a smooth transition to Illinois Tech. Join Zoom meetings to answer any questions they may have about the program
- Run the Illinois Tech Physics Instagram page to help promote our department
